Lift No AV

# MIDILIFT XL*plus*VERTICAL LIFTING PLATFORM WITH CABIN **CERTIFICATE OF TEST AND EXAMINATION AFTER INSTALLATION**

Site Address:							
Lift Number: AV							
Contract Electrical Supply: 230 V 1 Phase 50 Hz							
Travel: m Number of levels served:							
Rated Load: 400 kg Rated Speed: 0.15 m/s No. of Persons: 5							
Results from testing: The shaded portion of the YES or NO answer check box is the expected correct result. If the results from any of the following tests are not satisfactory, (except where stated in a specific exemption) then remedial works must be undertaken and the test reapplied until the correct result is attained.							
EXAMINATION AND TEST ( <u>Ensure lift is properly isolated before conducting these</u> <u>earth bonding &amp; insulation resistance tests</u> )							
1. Earthing Arrangements (the size of the earth protective conductor must be equal in size to the supply phase conductor)							
a. Equipotential bonding: Is all metalwork that encloses live electrical conductors bonded to the main earthing terminal by earth protective conductors? (this includes the electrical component enclosure, trailer connection pcb mounting plate, any call station & call button face plates, Ditec power operated door enclosure and roof light)							
Note: ensure all designated earth conductors in multicore are connected to appropriate earth terminals, and NOT left floating.							
Supplementary bonding: Is all extraneous (metal work that is not normally associated with the electrical installation) metal work connected to earth?  (this includes all lift framework and associated conductive mechanical parts of the lift)							
b. Is the cabin roof bonded to earth  YES NO							
c. Is the resistance of all earth bonding conductors, identified in the previous visual inspection, to the main earth terminal (sited in the upper landing control panel) <b>not greater than <math>0.5\Omega</math>?</b> (remember to discount the value of the meter leads when taking this reading, to do this, short the meter leads together, take reading, then deduct this value from your measured test reading)							

	No AV nsulation Resistance to Earth						
a.	Power circuits (select 500v test on meter). Turn off landing control station RCD. Test insulation to earth from both the L & N terminals on the RCD 'supply' side. Value greater than $5M\Omega$ ?						
b.	Power circuits (select 500V test on meter) Turn off carriage mains isolation switch & unplug PL26 from the trailer PCB.  Test insulation to earth from both L & N terminals on the disconnected plug. Value greater than 5ΜΩ?						
	Electrical Tests Sure that all connectors and wires a	are reconnected b	pefore turn	ing on lift po	wer.)		
a.	Mains voltage, at time of test		V (min =21 max=253V				
b.	Control circuit voltage between G1 and GND		V (min=24) max=30Vd				
c.	Wiring Manual Revision						
d.	Controller software version				]		
e.	Is the lift dedicated power supply identifiable and in accordance with that specified on the Builders Work drawing note B1 (lockable isolator, rating/type etc)?						
f.	Record MCB rating (i.e. type 'D') and trip current (see note B1 on Builders Work drawing).						
				Trip cur (Amps)			
g.	Third party UPS only: Is the output protected by the MCB referred to in		N/A	YES	NO		
h.	Third party UPS only: Does the output of the UPS terminate in the isolator referred to in Table 3e)?						
<u>4. S</u>	4. Sensitive Edges						
a.	Do the protective light curtains on the cabin entrance(s) stop lift YES NO movement?						
b.	Do the upper and lower mechanical safety edges on the cabin ves No entrance(s) correctly stop lift movement?						
<u>5. Is</u>	solation Keyswitch						
a.	Does the isolation keyswitch at the lo	ower landing disab	le the	YES	NO		
b.	Do the landing isolation keyswitches (where fitted) disable the APP NO appropriate call button.				NO N/A		

# 6. Levelling Accuracy

Lift	No AV			
a.	With the rated load on the platform (400Kg), does it level to within ±10mm of the landings served?	YES	N	0
<u>7. S</u>	Safety Contacts and Circuits			
a.	(i) Is a stop switch provided in the cabin, the landing control box, the test control box, above the cabin ceiling and also in the pit?	YES		NO
	(ii) Is the pit stop switch located within 1m of the lowest entrance? (1m distance cannot be achieved if the lowest landing entrance is on side C. If this is the case then answer N/A).	YES [		NO
b.	Does each stop switch prevent movement of the cabin when operated?	YES		NO
C.	Remove 'connector A' from the manual release disc. Is the electrical safety chain broken?	YES		NO
d.	Does the safety switch on the hinged cabin ceiling prevent movement of the lift when operated?	YES		NO
<u>8. L</u>	Doors and Interlocks			
a.	Are all enclosure doors/gates fitted with interlocks?	YES	N	0
b.	Do they operate correctly?	YES	N	0
C.	With the cabin between floors (out of door zones) are the doors/gates prevented from opening via the normal cabin and landing controls?	YES	N	o
d.	With any door of the lift open, is lift travel prevented?	YES	N	0
e.	Is the door lock bolt engaged by at least 7mm into the door When de-energised?	YES	N	o
f.	With the cabin at each floor level confirm that only the door at that	level unl	ocks.	
W	ith the cabin positioned at the <b>bottom floor</b> :	N/A	Yes	No
	Confirm that the <b>top floor</b> door(s) cannot be opened Confirm that all intermediate floor door(s) cannot be opened			
W	ith the cabin positioned at all <b>intermediate floors</b> (N/A if none):	N/A	Yes	No
iv	Confirm that the <b>top floor</b> door(s) cannot be opened  Confirm that all other <b>intermediate floor</b> door(s) cannot be opened  Confirm that the <b>bottom floor</b> door(s) cannot be opened			
W	ith the cabin positioned at the <b>top floor</b> :	N/A	Yes	No
	. Confirm that the <b>bottom floor</b> door(s) cannot be opened i. Confirm that all <b>intermediate floor</b> door(s) cannot be opened			
g.	Are the lock bolts chamfered at the upper level doors only? (Check that all upper landing doors can be closed and locked without the use of a key after emergency opening).	YES	N	0
h.	Are all fixings present in the door hinge assemblies?	YES _	N	o

Stannah Lift No AV N/A Yes No Fire door option only: i. Has the intumescent fire seal, located around the periphery of each landing door, been cut and fitted as per the Installation Guide? Is the gap between the top of each landing door and the underside of the header ≤ 5mm? (A 3mm thick spacer strip is provided for each landing entrance to reduce the gap if necessary) 9. Clearances Is the running clearance between the shaft and the cabin YES NO a. entrance safety edge less than 20mm? 10. Notices a. Is the 'emergency lowering' notice fitted in the control panel? **YES** NO (Part No. 6205305) Is the following notice fitted adjacent to the mains isolator? b. YES NO "Lift mains electrical power supply" (Part no.6100225) Is the rated load of 400Kg displayed in the cabin? YES NO C. d. Is the pictogram forbidding standing on the ceiling prominently displayed on the top of the ceiling? YES NO (Part no.6201189) Is the emergency release warning notice fitted to each cabin e. **YES** NO entrance sill? "HAZARD OF FALLING....." (Part no.6201123) 11. Observations a. Do all digital display units operate correctly? YES NO With the doors closed and the lift ready to run, do the cabin b. NO lights switch off after 3 minutes of no lift operation? If the lift is to be connected to the building fire alarm, does it YES NO C. home correctly and ignore all user inputs upon activation? N/A N.B: This option is not a mandatory requirement. If this option is included but the customers fire alarm shutdown connection is not available at the time of commissioning, then this does not prevent the lift from being put into service. Instead tick "NO" but this must be recorded on the Outstanding Items Sheet. d. Has the cabin floor panel been fixed down from underneath YES NO using the 5-off No.6 x 10mm self-tapping screws? Have the locking plates been secured in position to retain the YES e. NO Binx nuts on the bottom of the 4 cabin uprights? 12. Cabin safety gear and over speed governor operation Has the soundness, mounting and fixing of the guide rails and YES a. NO the safety gear assembly been checked? b. With the cabin loaded to 500Kg, does the safety gear activate YES NO correctly at rated speed in the down direction? i.e. That the operation of the over-speed governor and the safety gear mechanism is correct. See appendix A for the procedure of this

particular test.

			Sto	anno		
Lift	No AV					
C.	With the cabin empty does the safety gear engage correctly at rated speed in the up direction? (See Appendix A for procedure)	YES		NO		
d.	Through visual checking, has the lift deteriorated at all, following the above test?	YES		NO		
e.	<b>IMPORTANT</b> : Have the M8 nuts on the top of the tension pulley device been loosened off and then locked off with a second nut, after ensuring correct tension on the overspeed governor rope? (refer to the Installation Guide section 14.2)	YES		NO		
f.	State the serial number of the safety gears (See appendix B)					
g.	Do the serial numbers of each safety gear match?	YES		NO		
h.	Does the guide rail thickness (Guia) marked on the side of the safety gear state 9mm? (See appendix B)	YES		NO		
i.	Are the safety gears mounted the correct way up (arrow stamped on the sides of the safety gear should be pointing up).	YES		NO		
j.	State the P+Q value stamped on the sides of the safety gear					
k.	<ul> <li>Is this value correct? (see below)</li> <li>719Kg if the number of counterweights = ≤ 208</li> <li>834Kg if the number of counterweights = ≥ 212</li> </ul>	YES		NO		
<u>13.</u>	Emergency Back-up Supply					
a.	Does the battery back-up supply power the cabin emergency light?	YES		NO		
b.	Does the emergency alarm device in the cabin operate correctly and provide two-way communication?	YES		NO		
<u>14.</u>	<u>Ultimate Limit Switch</u>					
a.	Does the ultimate limit switch stop the lifting platform 50mm (± 10mm) above the upper floor level when operated?	YES		NO		
<u>15.</u>	Traction Drive Unit Tests					

a. Motor Manufacturer:	
b. Serial or reference number:	
c. Electrical Details:	kW Vac

Measure and record the following normal running operational data: d.

Platform loading condition	Current Drawn <b>Amps</b>	Journey Time seconds	Lift Speed <b>m/s</b> (travel (m)/time(s))
Empty, down	6A <i>Max</i>		
Empty, up	3.5A <i>Max</i>		
Rated load, down	3.5A <i>Max</i>		
Rated load, up	6.5A <i>Max</i>		

Lift I	No AV		
e.	Confirm the journey time setting, 60 or 90 seconds?		secs
f.	The traction ropes fitted are 6x17 Seale+WSC sZ U 5mm and are tagged accordingly.	YES	NO
g.	Check for adequate traction using the emergency stop for the following tests:		
	(a). Ascending, with the cabin empty, in the upper part of the travel. Lift stops within 20mm.	YES	NO
	(b). Descending, with the cabin loaded to 500Kg, in the lower part of the travel. Lift stops within 20mm	YES	NO
h.	With the counterweight resting on elevated buffers, ensure that the empty cabin cannot be raised.	YES	NO
i.	Please state how many balance weights are fitted.		
j.	Is this number of weights correct to the iSYS paperwork?	YES	NO
k.	Does the cabin overload device operate when the max load is exceeded by 75kg? (475Kg)	YES	NO
l.	Has the live brake feed been wired correctly into the BRK terminal? <i>i.e the Brake is only powered when lift is in motion.</i>	YES	NO
m.	Unintended movement: With the cabin stationary, is lift movement prevented when the brake is released (i.e. self-sustaining) with:  (a) no load (b) loaded to 400kg	YES YES	NO NO
<u>16. l</u>	Emergency Operation and Communication Option		
a.	Which communication option is installed on the lift?		
	i. Intercom.		
	ii. Telephone.		
	iii. Autodialler.		
	iv. Other. (Please specify)		
b. <b>A</b>	utodialler Information (if applicable):		
	i. Does the Autodialler have an inductive loop?	YES	NO
	ii.Does the inductive loop operate correctly?	YES	NO
	iii.Is the Autodialler connected to a GSM? N/A	YES	NO
	iv. Has the Autodialler been programmed and tested?	YES	NO

Lift No AV
v.Please record the incoming phone number for the autodialler:
Please record and verify the programmed 'out going' phone numbers ensuring one is reserved for the nearest Stannah Service Branch.
1.
2.
3.
4.
5.
c. Emergency Communication:  i. Is two-way communication achieved and clear, both within the car and at the remote location?  NO
d. Emergency / manual operation:
Does the emergency/manual operation function correctly?
17. On Site Documentation
a. Has a copy of the wiring manual and any associated additional drawings been left in the pocket provided within the control panel?
18. Exemptions
ist any known non-compliances, showing (in all cases) the authority for such exemptions.
lame of authority for this exemption: Printed: Signature:
<u>19. Site</u>
a. Are there any irregularities/special revisions on site?  (If YES please record below)
20. Product Variation/ Modifications
a. Record any agreed contract specific modifications undertaken on this contract during the installation process. i.e. any agreed design changes during the installation phase;.

## Appendix A

Procedure for carrying out the safety gear operation test. 12.b

Lift to be operated via Test control box at upper landing control panel. The cabin must also be at the upper floor so that it can be accessed to check the safety gear.

- 1. Place installation shorting link from terminals G1 to G1B within the upper landing control panel. This will link out the overspeed governor switch.
- 2. Run lift at rated speed in the down direction (with appropriate load).
- 3. Activate over-speed governor.
- 4. Check that the safety gear mechanism has activated and that both sides of the safety gear have engaged equally.
- 5. Place installation shorting link between terminals G2 and G2A within the upper landing control panel.
- 6. Run lift in opposite direction to reset safety gear mechanism.
- 7. Remove link from G2 and G2A.
- 8. Run lift at rated speed in the up direction (with no load).
- 9. Activate over-speed governor.
- 10. Check that the safety gear mechanism has activated and that both sides of the safety gear have engaged equally.
- 11. Place installation shorting link between terminals G2 and G2A within the upper landing control panel.
- 12. Run lift in down direction to reset safety gear mechanism.
- 13. Reset over-speed governor switch and remove links from terminals G1 to G1B and G2 to G2A.
- 14. Enter the cabin and ensure that the safety gear mechanism has returned to the centre.

### Appendix B

Issue No.	Issue Date	Name	Revision detail
V2	11-02-20	Paul Clifton	Questions 7d and e added Item added to confirm correct emergency operation. Users name and telephone section added
V3	19-01-21	Mike Hood	Individual checks added to ensure only the landing door of the floor at which the platform is positioned will open.
V4	21-04-21	Pete Jeffery	Test sheet modified to suit new notices (introduced on Export Project): Ref 10a to 10e Rated no. of persons added to page 1. Note added for pit stop switch if lowest entrance is adjacent (side C) ref 7a(ii) Tolerance of ± 10mm added for ultimate limit ref.14a Compliance with b/w drawing removed – was ref 19a Testing of inductive loop option added ref 16b(ii)
V5	28-04-21	Pete Jeffery	Item 7(e) deleted – correct operation of safety switch on pit prop which was added on Issue V2.  XL+ model does not have a pit prop.
V6	01-11-21	James Nicholls/ Pete Jeffery	New tests added for third party UPS contracts. Tests check to confirm that UPS has been incorporated in lift supply chain correctly and that output is protected by MCB and can be isolated and locked off. Ref Table 3 g) and 3 h). Item 12 e) reworded for clarity – tension pulley device nuts
V7	04-07-22	Pete Jeffery	Items 8i(i) and 8i(ii) added to Table 8 for fire door option
V8	03-01-23	Pete Jeffery	Items 21d), e) and f) amended/added for name plate with UKCA mark. Exemption note added to 11c) for fire alarm shutdown. Item 11d) re-worded for clarity Item 11e) added for Binx nut locking plates
V9	03/01/24	Pete Jeffery	Item 8g: Note added to check that upper landing doors with chamfered lock bolt can be closed and locked without the use of a key after emergency opening.
