MAINTENANCE ISSUE

For the Attention of : Service Engineers, Installers, Trade Customers, Training

Date : 20/3/14

Product : Midilift SL and SL+

Subject : Key variations on pump units

Pages : 2

Originator : Stannah Lifts Ltd, Anton Mill, Andover, Hants SP10 2NX 01264 339090

Detail

We are continuously developing our hydraulic pump units with suppliers. Recent changes have meant that we are now using a different supplier for our hydraulic power unit. This means that there are 3 different pump units in circulation on our installations. Unfortunately each of them has a different type of unlocking key. Keys are always left with the customer on lift handover but if replacements are required they can be obtained from our spares department. The next page shows what is required for each pump unit and its associated part number.....

IGV pump unit which
uses a standard
triangular lift key

RFP unit that uses a
cylindrical key.
Stannah part no. :
556054

Hydrax pump unit which
uses a square key.
Stannah part no.555800

Summary

Pump unit Keys vary due to recent product developments. The correct ones are highlighted above and are all available from our spares department.
