TECHNICAL BULLETIN

MAINTENANCE ISSUE

For the Attention of : Branch Managers, Phil Beresford, Darren Cooper

Date : 19 February 2014

Product : MP– MPGo model

Subject : Controller upgrade - Auto Rescue system – upgrading the MP control from a 4 pole to a 5 pole main switch.

Pages : One

Originator : Stannah Lifts Ltd, Anton Mill, Andover, Hants SP10 2NX 01264 339090

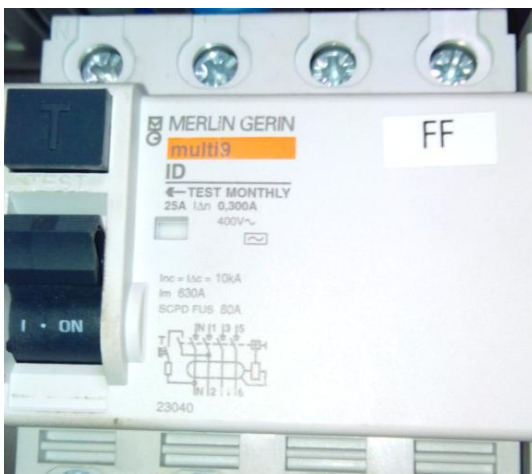

Detail

On the 15 November 2013 MP advised: There are two switches in the Controller QF and FF. The older version controllers are fitted with 4 pole switches. The procedure in this case would be to switch off the Mains and UPS if you want to work at zero energy.

Since September 2013 MP fitted their controllers with a **5 pole main isolation switch FF**, that disables the UPS as well. MP have requested that where we identify a 4 pole FF Switch we can replace it for a 5 pole.

Action

MP have provided 20 auxiliary contacts with wiring diagram (10 contacts ref. ACTI9 + 10 contacts ref. MULTI9. MP are not able to determine what main switch have been supplied with each controller, (see attached photos). Engineers will be issued with the 2 types of aux. contacts, **only one model will fit the controller.**

Below is the list of jobs that need checking and the wiring diagram will included with the auxiliary contacts. If you have any questions concerning this retrofit the please contact:

Huib Schipper at MP on: 0031 227 600 400 or 0031 652 36 4872
